

HERCUSHAKE

Composite Shake Roofing

**Discover the
Craftmanship and Authenticity
of Natural**

What is Composite Shake Roofing?

Hercuhake is a premium composite shake roofing, crafted to capture the timeless beauty of natural wood shakes while delivering unmatched performance.

Made from a refined blend of high-quality polymers and advanced composites, Hercuhake offers the warmth and texture of real wood—without the challenges of warping, rotting, or heavy maintenance.

Engineered for strength, weather resistance, and long-lasting durability, it brings together aesthetics and reliability, making it the perfect choice for modern roofing solutions.

From Asphalt to Composite Roofing

Homeowners today are moving beyond traditional asphalt shingles, which often suffer from cracking, fading, and a limited lifespan.

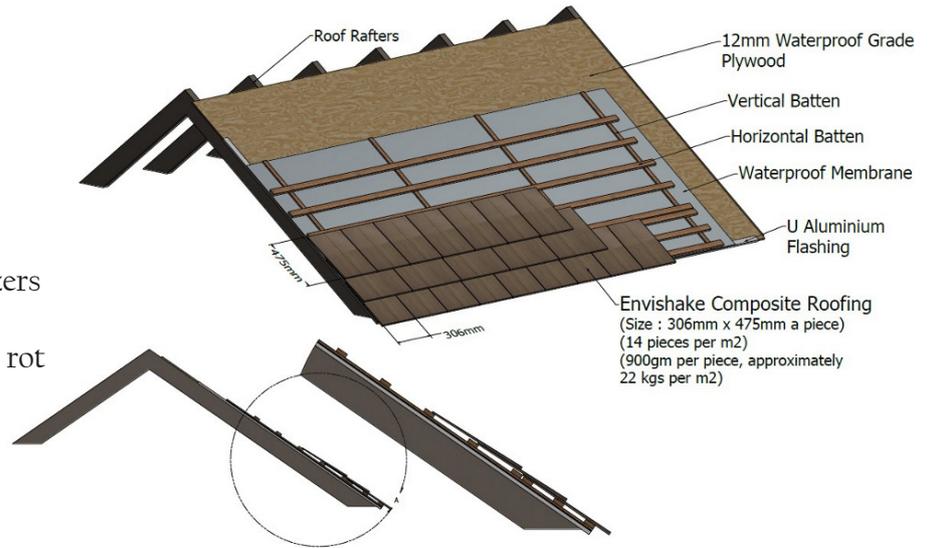

Composite shake roofing offers a smarter alternative—lasting three to four times longer while requiring only minimal upkeep.

With its balance of durability, sustainability, and timeless design, composite roofing is quickly becoming the preferred choice for modern homes.

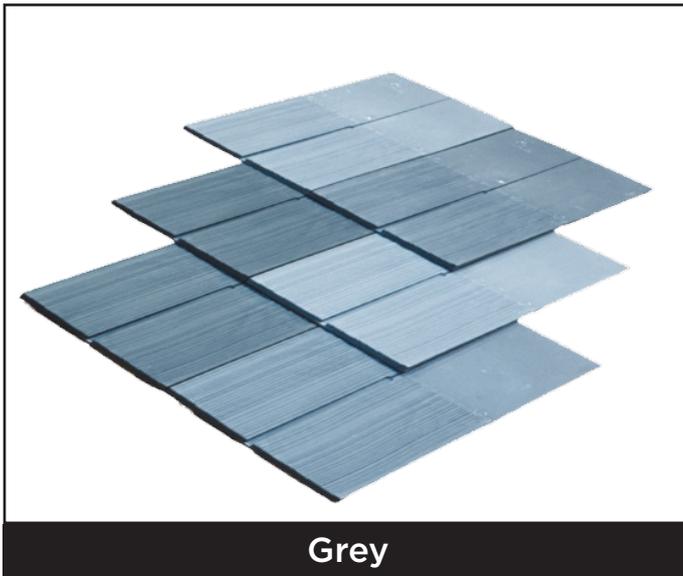

Installation

Technical Specifications

Material	: High Performance Polymer-composite blend
Dimension	: 475mm x 306mm
Thickness	: Tapered 6-13mm
Fire Rating	: BS476 Class 1
UV Protection	: Built-in UV stabilizers to prevent fading
Water Absorption	: Near zero, prevents rot
Lifespan	: 50 years
Warranty	: Up to 25 years

Aged Wood

HERCUSHAKE

Features Benefits

Authentic Look of wood shake/shingles
Natural woodgrain texture with modern performance

Weather Resistant
Built to withstand heavy rain, strong winds and UV exposure

Low maintenance
No need for frequent treatment, staining or replacement

Cost-Effective
Long lifespan compared to natural wood shake/wood shingles, saving on replacement costs

Durability & Strength
Resists rot, cracking, warping and splitting

Installation & Maintenance

Easy to install with standard roofing tools

Lightweight reduces structural stress

Minimal maintenance

Resistant to mold, mildew, and rot
